DETAILED ACTION

Specification

1. The specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification. Please note: reference to Figs. 12 and 13 are omitted from Detailed Description of Drawings in the specification. Correction is required.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. **Claims 1-30 are rejected under 35 USC 102(e) as being anticipated by Tsunenari (US 7,076,449).**

Tsunenari teaches all the limitation of claims 1-30. For example, Tsunenari discloses a system and methods to effect return of a consumer product.

Tsunenari discloses a client computer (i.e. first computer) with client printer remotely connected a network to a web server (i.e. second computer) and

database. Tsunenari discloses a network server which effects the return of a consumer product and is adapted to present to a client located on the network one or more form pages (i.e. HTML/ XML) adapted to elicit consumer information including an identification of the consumer product to be returned and an identification of the present location of the consumer product. Tsunenari discloses the server can receive the consumer information and transmit to the client shipping label data which includes an identification of a destination for the consumer product and of a carrier service. The destination is selected in accordance with the consumer information and without regard to where the consumer product was purchased (see at least abstract; Fig. 1 (100-170); col. 1, line 5 through col. 3, line 22; col. 4, line 24 through col. 5, line 26). Tsunenari further discloses:

- establishing an interface system that is capable of communicating with said first and second computer systems; (see at least Fig. 1).
- receiving at said interface system a customer return request from said first computer system; (see at least col. 2, lines 25-39; col. 4, line 24 through col. 5, line 26).
- applying one or more business rules to said customer return request to determine whether said request is authorized; (see at least Fig. 11A; col. 15, lines 19-47).

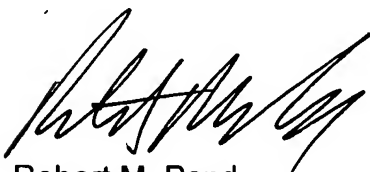

- assembling a return service request based at least in part on said custom return request; (see at least Figs. 3-8; Fig. 9 (S9000-S9040); col. 9, line 44 through col. 10, line 5).
- transmitting said return service request to said second computer system; see at least Fig. 9 (S9000-S9040); col. 9, line 44 through col. 10, line 5).
- receiving at said interface system an image of a shipping label from said second computer system in response to said customer return request; (see at least Fig. 10i; col. 12, lines 44-60).
- and providing said shipping label image to said first computer system. (see at least Fig. 10i; col. 12, lines 44-60).
